

## Why build with Furniture Grade PVC?

**Furniture Grade PVC offers a easy-to-work-with products to help you realize the full potential of your PVC project.**

### Better Connections

Furniture Grade PVC fittings provide more configurations than standard off-the-shelf plumbing alternatives. **3-Way, 4-Way** and **5-Way PVC fittings** give you more connection points while using fewer fittings.

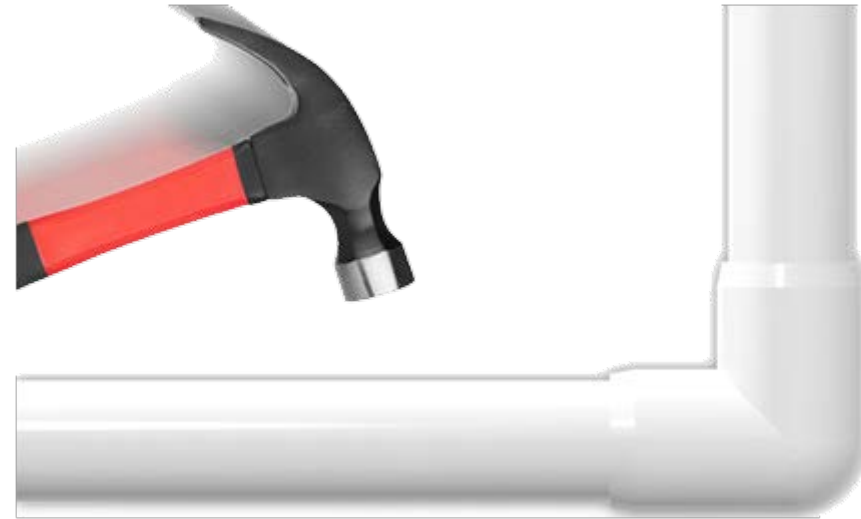

### Fun in the Sun

Furniture Grade PVC has a non-toxic additive introduced during manufacturing that **inhibits the impact of sunlight** and other ultraviolet sources on the molecular structure of the PVC. Without this, the PVC would yellow, crack, become brittle and break.

## Good Looks

Furniture Grade PVC has a **beautiful glossy surface**, ideal for display items such as furniture, shelves, pool products, and so much more. It delivers **when appearance is important**.

All fitting sockets have a gradual taper down to the PVC pipe, so that the final product looks finished. This taper also helps keep your project hands-on friendly, as there are no sharp or blunt edges.

## Impact Proof

Furniture Grade PVC can take a beating. Its designed to **withstand impacts**, or drops from a substantial height and **won't suffer any cracks or breakage**. It's also able to withstand additional load (weight) applied to both fittings and pipe over standard plumbing products
